Table 9.15, PO<sub>4</sub> row: Change PO<sub>4</sub> to Pi

Corrected:

Pi      4 mg/dL      × 0.32      1.3 mmol/L

*Explanation: Inorganic phosphorus (Pi) is what is actually measured, not PO<sub>4</sub>, but Pi is present in phosphates. A measured Pi concentration of 4 mg/dL would actually be about 12.3 mg/dL of PO<sub>4</sub>, and each would contribute about 1.3 mmol/L to osmolarity. The relationship between Pi and PO<sub>4</sub> is as follows: 1 mmol of PO<sub>4</sub> (M<sub>r</sub> ≈ 95) contains approximately 31 mg of phosphorus and 64 mg of oxygen, so 1.3 mmol of PO<sub>4</sub> contains about 40 mg of phosphorus and 83 mg of oxygen. Thus 1.3 mmol/L of PO<sub>4</sub> is 40 mg/L or 4 mg/dL.*
