OFFICIAL PROTOCOL

CLAY PAWS

Clay Paws are paw prints of a patient's foot in baked and decorated or undecorated clay given to clients in memory of their pet. The Clay Paw kit is available in the Dispensary or Cubex machines. Most supplies for making Clay Paws are available in the Self Help Laboratory (Mosier E-113)

Paper plates are available for identification purposes. Please complete patient information on the label on the paper plate or attach the patient's label. Add your name and clay paw date. Clay Paws should be baked on the metal tray in the toaster over. Do not put the paper plate in toaster oven. After Clay Paw is baked, please place it on the paper plate on the shelf to cool.

Paints and brushes are also available. Paint/decorate on the covered counter top and clean up any spilled paint. Rinse brushes thoroughly with water when finished and place them on the cardboard tray to dry. Leave Clay Paws on the shelf when you are not working on them so the counter will be available for others to use.

When you are finished with the Clay Paw, please take it with the identification paper plate to Administrative Support personnel in Mosier A-117B (near Medical Records) to be mailed to the client.
